Re: Mr. John Samuel, aged 26

Dear ~~Mr.~~ ~~Ms.~~ Wilson

I am writing regarding Mr. Samuel who was admitted on 21 August and was diagnosed with possible concussion, ~~had~~ hypoglycaemic episode and ~~has 12 sutures to~~ laceration behind his left ear. He is being ~~-----~~ ~~?! purpose missing?~~

Mr. Samuel is a student who lives with 3 others in rental housing. His parents lives in Leeds. He often buys takeaway food and only sometimes cooks his own meals. Moreover, he is very sociable and often visits pub with his friends. Also, often binge drinks on weekends.

Mr. Samuel has had diabetes for the last 16 years and has history of non-compliance with his dietary regime, especially since leaving home. He is a heavy drinker. Moreover his recent episode was precipitated by football, as he played on empty stomach and hit head following collision with another player.

During hospitalization, Mr. Samuel was commenced with subcutaneous insulin on sliding scale, according to his blood sugar levels. Monitored his blood sugar levels 6 hourly and neurological

observation was done 2 hourly. His wound was managed and ice packs was provided to reduce swelling. Furthermore, he commenced his dietary regime with dietitian. Also, educator provided regarding diabetes education.

Mr. Samuel made overall good progress as he has sound knowledge of his condition and insulin therapy. Skin at injection site is in good condition and wound is dry and has normal weight. Additionally, his dietary compliance in hospital was good.

In the view of above it would be greatly appreciated, if you could provide ongoing continued care to Mr. Samuel. Please, ensure his continued dietary compliance. I will be glad if you could initiate visits with drug and alcohol counsellor for his condition. Kindly, ensure his sutures need to be removed in 1 week.

If you have any further queries, please feel free to contact me.

Yours sincerely
