Dr Harry Moxham
Bayview Hospital
89 Canyon Road
Bayview

1/12/16

Dear Dr Moxham,

Re: Mrs Sheila Wilkes, DOB: 02/02/1949

I am writing to refer Mrs Wilkes, who is admitted in this hospital with symptoms suggestive of severe depression. Mrs Wilkes needs psychiatric assessment and management as she is suicidal.

Mrs Wilkes is married and has two children who live abroad. She lives alone as her husband who has dementia lives in a care home. She drinks wine daily and resists going out to meet people. However, she is lonely and misses her family. She has a past history of depression after her second child was born.

Mrs Wilkes first visited me on 25/11/16 with migraine and was anxious about having memory loss. She also expressed that she wanted to live with her husband in care home. In addition, she was diagnosed with urinary tract infection and was commenced on Trimethoprim 1gm daily for 5 days with request to follow up after 5 days along with urine culture and sensitivity report. She was also advised to contact her children.

Mrs Wilkes missed her next appointment and could not be contacted. However, she was found unconscious and was brought to the emergency department with low blood pressure and glucose on 30/11/16. She is on IV fluids and antibiotics, has been moved to ward today. Her general condition is stable but she is

very agitated, ~~silent~~ and suicidal. She wants to see her husband and children. Also, she refuses food, oral medications and is in high risk of falling.

I would be very grateful if you could assess Mrs. Wilkes regarding her symptoms and provide a better management plan for her.

If you need anything, please donot hesitate to contact me.

Yours sincerely
