Re: Ms Mary Bell, aged 66

Dear Ms Rudik

I am writing regarding Ms Mary Bell who was admitted on 24 June 2017, ~~Newtown Community Hospital~~ with unstable diabetes mellitus and infected left foot ulcer. She is due to be discharged and requires further monitoring and care.

Currently, Ms Bell's foot ulcer is regularly dressed with normal saline, her wound margins was monitored, as a result there was no signs of complications and <sup>is</sup> healing properly. She is a known case of <sup>Non</sup> insulin dependent diabetes mellitus for 15 years, <sup>for which she has been</sup> so she was commenced on glibenclamide daily <sup>which needs</sup> and to be continued. <sup>Additionally she was initiated on</sup> Along with that, <sup>her</sup> antibiotic therapy (Amoxycillin) <sup>which needs to be</sup> was renewed <sup>after</sup> to ensure completion of current course.

Ms Bell is a retired single woman who lives alone and has no relatives <sup>and/or</sup> close friends. She has periodic problems with self administration of hypoglycemic medication. Therefore, her lack of interest on outside and retirement has led to increased alcohol intake and lower quality in diet?

→ This is informal connector

When do we use therefore?  
 → to show cause and effect.  
 IS it because of her issues with administration of medication she started to increase her alcohol consumption?

Please record your answer on this page.

In light of the above, it would be greatly appreciated if you could provide further <sup>encourage</sup> monitoring of Mrs Bell's compliance towards medication. Please, advise her to <sup>monitor</sup> get involve in moderate exercise programme, and ~~ensure~~ her blood sugar level, alcohol intake and her diet. Please note, community social worker service should involved for establishment of income producing activity. Kindly engage her in different social activities.

If you have any queries, please donot hesistate to contact me.

Yours Sincerely

Nurse
