Re: Ms Mary Bell, aged 66

Dear Ms Rudik,

I am writing regarding Ms Mary Bell who was diagnosed with small injected left foot ulcer associated with unstable diabetes mellitus. She now requires ongoing monitoring and assessment from your service following her discharge today.

Ms. Mary Bell is a retired single woman who has small pension for income. Since her retirement her alcohol intake has increased and follows unhealthy diet. Regarding her medical history, she has been non insulin dependent for 15 years for which she takes Glibe-nclamide 5mg, metformin 850mg, Augmentin Duo Forte 875/125mg orally daily.

On 24 June 2017, Ms Bell was admitted with ^{the} diagnosis of small injected left foot ulcer secondary to unstable diabetes mellitus for which she was commenced on antibiotic therapy which course has soon to be completed. Apart from that, her hypoglycaemic medication is continued however she has some periodic problems with self administration. Her wound was managed with normal saline dressing daily and her wound margins were monitored.

Based on the above information, it would be highly appreciated

If you could provide assessment and monitoring on her blood sugar levels, alcohol intake, diet and medication regime. Please encourage her for moderate exercises and involve her in social activities for her income production as she has small pension for her income. Moreover, kindly review her wound healing process and observe for any signs of complications.

If you have any queries, then please do not hesitate to contact me.

Yours Sincerely,

Registered Nurse
