Community Nurse

Newtown Community Health Centre

Newtown

Re: Ms. Mary Bell, 66 years

Dear Ms. Rudik,

I am writing this letter to refer Ms Mary Bell, a 66 years patient who is ready to be discharged from our hospital today. She needs your professional assistance and care after her discharge.

During admission, Ms Mary Bell had unstable diabetes mellitus and small infected left foot ulcer. She has a history of non insulin dependent diabetes mellitus for 15 years. She has been asked to continue her own medication, medical hypoglycemic agent (Glibenclamide) 5mg daily and Amoxicillin (Augmentin Duo forte) 875/125n orally twice a day. She has been informed to get a antibiotic therapy for review after the completion of her current course. Daily Saline dressing was applied and wound margins were monitored. Ulcer was observed for any signs of complication and healing progress was reviewed regularly.

After discharge, Ms. Bell's condition needs to be monitored for any medication complication. Her blood sugar level

alcohol intake and diet also needs to be monitored closely. Please encourage her for moderate exercise programme. She has been suggested to establish an income-producing activities and to establish social activities.

It would be appreciated if you could help her to get a community social worker service.

If you have any questions please contact me.

Your sincerely
Nurse.
