Dear Dr Moxham,

Re: Mrs Sheila Wilkes | DOB: 02/02/1949

I am writing to refer Mrs Wilkes, who ~~leaves~~^{lives} alone and has been diagnosed with severe depression. Her condition is stable now but she requires further assessment and management of her condition after her discharge today. She was admitted to our hospital on 30/11/2016 with the help of escort after being found unconscious in her bed room.

Mrs Wilkes was admitted to our hospital on 20/10/2016 with the help of escort after being found unconscious in her bedroom.

During her first visit on 25/11/2016, she had symptoms suggestive of migraine with loss of memory and low mood. However, on assessment, she was diagnosed with urinary tract infection. Trimethoprim was commenced 1g daily for 5 days after sending urine samples for culture and sensitivity and she was advised for return visit after four days for review.

Mrs. Wilkes remained non-compliant after due date, for which the authorities were contacted. On admission, her blood glucose level was 1.8 with blood pressure on lower side. New antibiotics following culture & sensitivity test was commenced.

Please record your answer on this page.

(Only answers on Page 1 and Page 2 will be marked.)

Ms. Wilkes is stable at present and is ready to get discharged today. However, she is having difficulty to ambulate and has been experiencing severe mood swings.

In view of the above, it would be highly appreciated if you could further evaluate and manage the patient as you find appropriate. It is requested to assess patient's suicidal behaviour. Kindly continue with the attached medications. Of note, social services may be contacted for patient's best interest and for required funds.

If you have any further queries, please do not hesitate to contact me.

Yours Sincerely,
Doctor
