Dr Sorjen Anderson

Cardiologist

St George's Hospital

Blackshaw Road

London SW 17 0QT

27 September 2017

Dear Dr Anderson,

Re: Mrs Elizabeth "Lizzie" Hughes

DOB: 11 March 1951

Thank you for seeing Mrs Hughes, a 66 year female who presented to the hospital with signs and symptoms of Unstable Angina. I am referring her to you for urgent assessment and further management of her condition.

Today, Mrs Hughes visited the hospital for a review appointment. On examination, ~~the~~ vital signs are within the normal range. The resting ECG showed no abnormalities. Regarding her past medical history, she ~~have~~ ^{has} had Addison's Disease and hypertension since 2004 and 2006 respectively. She is under medication Corticosteroids. Please note that she is a social alcohol consumer but, she doesn't smoke.

On 20 Sept 2017, Mrs Hughes presented to the hospital with the complaint of central chest pain which occurred on exertion for last one week. She used to ^{experience} the pain three times a day which lasted for less than 15 minutes. The pain was associated with dyspnoea, both at day and night. However, it relieved on rest. She also mentioned that the pain radiated towards her

left arm. Although, there were no signs of palpitations, orthopnea and paroxysmal nocturnal dyspnoea. On examination, the vital signs were normal and the resting ECG showed no abnormality. She also mentioned that her grandmother had Acute Myocardial infarction at the age of 57 and she died of Ischaemic stroke at 59 years. The thought of having this event in her life ^{has} made her anxious. Therefore, a review appointment was scheduled for her after a week.

Mrs Hughes has been advised about the risk of myocardial Infarction. It would be much appreciated if you could carry out an urgent assessment for further managing her condition.

Should there be any queries, please do not hesitate to contact me.

Yours sincerely,

Doctor
